

Sustainable Industrial projects will become an important part of Kansas City's Green future. But where do you start? You have to walk before you run, and before you walk...

you have to crawl.

Reserve your place today for the Kansas City Manufacturing Network's Green Industrial Crawl and learn how 3 local businesses made changes to their business practices to become more environmentally responsible.

KCMN Green Industrial Crawl

Thursday, November 6, 2008

Tour Stops

LaserCycle

www.lasercycle.com

Founded in 1992 in the basement of Rick Krska's rural Kansas home, LaserCycle quickly grew to become the premiere provider of remanufactured print cartridges in the Kansas City area by focusing on high quality recycled products, true cost savings to corporate cartridge consumers and exceptional customer service. InkCycle, the manufacturing side of the business, is the first and only company in the aftermarket industry to implement a water filtration process for its waste water.

Performance Roof Systems, Inc.

www.derbigum.com

Manufacturer of DERBIGUM, DERBICOLOR, DERBIBRITE AND DERBISOLAR, Performance Roof Systems researches, develops, manufactures and markets high performance modified bitumen roofing solutions with an emphasis on clean energy, sustainability and environmental stewardship. In September of 2008, the company unveiled its energy research laboratory and the first commercial-scale solar roof system demonstration project. Performance has also launched e-PGEN, its new energy division.

cfm Distributors, Inc.

www.cfm distributors.com

A 40 year old employee-owned regional HVAC and refrigeration distribution company, cfm is located in a 100,000 plus square foot 7 story building in Kansas City's historic West Bottoms. Cfm recently completed a 'whole facility' lighting retrofit in partnership with Kansas City Power and Light, and is creating a parking area with zero energy, zero water use and near zero runoff. Cfm's green parking area features flow through gravel paving, solar PV powered security lighting and rainwater recovery and distribution systems to irrigate a community green area.
